We're in This Together

The Tigerlily Foundation understands that patients with chronic conditions can often face financial and non-financial challenges that lead to the need to make difficult decisions about paying for groceries, childcare or life-saving medical care. Tigerlily's RAISE platform supports patients in overcoming these challenges that they face going through treatment.

## Resources and Assistance for Support and Empowerment

This platform allows patients to make a list of their needs in a registry-style format that can be shared with friends and family who can then claim needs from the patient's registry and provide financial and non-financial support. RAISE makes it easy for a patient to share their needs, but more importantly makes a patient's needs visible to those that are willing and able to provide support.

The RAISE platform is patient driven and will evolve as patients provide insights -- enhancements will be shared as the platform continues to grow.

**There is no cost to join and use the RAISE platform!**
